

Pacific Turbine Brisbane Signs contracts with Dallas Airmotive

Pacific Turbine Brisbane Ltd (PTB) has signed two contracts with Dallas Airmotive (DAI) of Dallas USA. The contracts appoint PTB as sales representative for Dallas Airmotive in Australia and the surrounding region, and as a Dallas Airmotive Authorized Service Center.

PTB will focus primarily on the PT6A powered aircraft that dominate the region, and also will represent DAI's full range of engine product lines and associated services.

As an Authorized Service Center, PTB will offer Hot Section Inspection services and support Dallas Airmotive field service efforts in the region. DAI will supply engine overhaul services and new parts support to PTB.

"Pacific Turbine Brisbane has a long-standing reputation as a quality engine service provider," said DAI Vice President International, Willy Harmon. "This makes them a perfect complement to Dallas Airmotive and strengthens our global service capabilities."

Dallas Airmotive has the largest global field service organization among independent repair and overhaul companies. The company services 86% of the turbine engine models used in business and general aviation worldwide.

"To partner with one of the largest independent turbine engine repair and overhaul providers in the world is an exciting addition to our capabilities and will allow us to offer the full range of services to support a product that we are passionate about" said PTB Managing Director Craig Baker.

Pacific Turbine Brisbane specializes in sales, repair, overhaul, rental and parts support for Pratt & Whitney Canada PT6A and Honeywell TPE331 turbine engines. The Brisbane facility performs hot section inspections and power section overhaul on PT6A series engines and up to full overhaul on the TPE331 series.

Pacific Turbine Brisbane's ability to provide finance for turbine engines for its customers is a valuable addition to the partnership.

The company is listed on the Stock Exchange of Newcastle (NSX) in Australia.
