

YANG YANG CHINA HOLDINGS LIMITED

ABN 21 109 469 383

Company announcement

29th Nov 2005

Yang Yang - first to market in Australia:

The Board of Yang Yang China Holdings Ltd is very pleased to announce that as a result of recent on farm inspections of its technology in China by Mr Pernec, of WSL Investments Pty Ltd, an agreement has been reached to convert the WSL Australian pig farm located in Young NSW to incorporate "LETU" technology.

Mr Pernec stated "that having experienced the results first hand he is confident this technology will initially enable WSL to permanently eradicate scouring in new borne and weaning stock and progress to improve the overall productivity and quality of pigs grown on our Young based farm". The terms of the agreement were not disclosed however enable Yang Yang to monitor the farm changes and publish the outcomes for promotion to the Australian and international pig industry.

About Yang Yang China Holdings Ltd:

ande.

Currently, scouring (Diarrhoea) and other bacterial diseases significantly contribute to poor quality and high morbidity rates of young pigs, causing lost profit, for the pig farming industry worldwide. Yang Yang China holdings Ltd, through its wholly owned China subsidiary Guandong JBC Biological Company Pte Ltd, utilises the chemical free proprietary probiotic "LETU" lacto bacillus within a holistic pig farming regime to produce high quality chemical free pork. Other benefits of the technology are that the smell of the farm is all but eliminated and the pigs appear more contented. Extensive scientific testing over a 2-3 year period has clearly demonstrated improved results for pig farming through the use of the propriety "LETU" lacto bacillus. Yang Yang now intends to promote this technology to the international pig market that currently produces in excess of one billion pigs per year.
