(NSX codes VBL, VBLO)

MEDIA RELEASE Monday August 24th, 2009 at 2.00pm EST.

Medvet Manufacturing Ceased

The company has recently been advised that the current manufacturer of our Stemcell and Stembank treatments, Medvet Science Pty Ltd intends to cease their manufacturing role with effect 7th September 2009.

The company has been supportive of Medvet Science Pty Ltd and Vet Biotechnology Ltd will continue to support the manufacture of stem cell products to the Veterinary industry.

The Board of Directors together with the General Manager are now seeking a new manufacturer and advises due to the scientific nature of our products we expect to incur delays in both locating and establishing this facility, hence the company's Stemcell treatments will need to be put on hold.

We are targeting November 2009 for relaunching the manufacturing operations and associated stemcell activities of the company.

We are also in discussions with various individuals concerning taking on new Veterinary products to support the future growth of the company.

We will advise of any future developments as soon as they come to hand.
