NSX – GENERAL ANNOUNCEMENT

Directors of Mount Rommel Mining Ltd are always pleased to report steady progress.

Today “progress” takes the tangible form of the issue to the Company of that licence critical for use and storage (at Thomastown) of what is classified as a “controlled substance” – cyanide.

In Victoria, operations at a mine site require completion of the Department of Primary Industries procedures, and a Planning Permit. While that type of documentation authorises how a site is occupied, constructed, etc, those procedures stop short of authorising the use of industrial chemicals so necessary for the recovery of gold.

The primary industrial chemical required for operations is cyanide. The initial licence issue (for Thomastown) ensures Directors the basis for a further permit for shipping and storage at Glenfine – when the time is appropriate.

It should be noted that this critical licence issue for “controlled substances” is a matter for the Department of Health.

Commercially speaking, there are two advances to be recognized –

1. The company will shortly be able to continue to completion its mini-plant gold recovery trials; and
2. The evaluation of Glenfine as a gold property is one important step closer.

F.L. Hunt
Director.
