INFORMATION FOR MEMBERS, MOUNT ROMMEL MINING LTD.

PROGRESS OF DRILLING AT CLUNES.

Hole CD15-07 is continuing, in order to investigate the centre section of the old Port Phillip mine structure.

The hole has been surveyed at depths 30, 90, and 140 metres, and has been found to be aligned correctly.

This hole has intersected two quartz-bearing structures, with no evidence of prior workings at those positions.

These two zones carrying various proportions of quartz were intersected as follows –

- upper interval beginning at 99.1 metres, through to 111.1 metres.
- lower interval beginning about 143.6 metres, through to 149.5 metres.

The core has been removed from site for safe-keeping. Logging and sample preparation is not planned until after the AGM.

The planned depth for this hole is unchanged, at 180 metres.

F.L.Hunt,
On behalf of Directors, Mount Rommel Mining Ltd.
