## **SHAREHOLDERS OF MOUNT ROMMEL**

This photo (taken yesterday) is of the gold recovered by plating onto stainless steel filings, then shaking the gold off those filing, to make the pure gold product observed via this photo.

For scale - the circular "bowl" under the thin paper holding the gold particles is about 180 mm. across.

The gold in the above photo certainly highlights a promise of things to come. This photo should put a spring in the Step of all Mount Rommel Members.

The Zadra E-cell is capable of producing gold product. This equipment ( as "built on a shoe string" ) awaits further improvement, and should really be regarded as the first in a series of steps, all aimed at improving gold recoveries, and better understanding of the nature of possible forms of gold from this unusual plant.

Directors' hopes are that Year 2016 grows into a Year for amazing results.

**MERRY XMAS TO ALL**

F.L.Hunt,  
Chairman
