27 October 2004

The Manager, Stock Exchange of Newcastle Limited 384 Hunter Street NEWCASTLE NSW 2300

Dear Sir,

### Report for Quarter ending 30 September, 2004

We submit the following quarterly report for Klondike Source Limited and its 100% owned subsidiary, KSL Exploration (Yukon) Limited (KSL Yukon) for the three months to 30 September 2004.

#### **EXPLORATION**

#### Diamond Core Drilling - Klondike Gold Field

The Company's 2004 program of six deep diamond drill holes in the core of the Klondike gold field was completed on 2 September (for locations see attached figure).

Since 1 July 2004, three diamond core holes (DDH04-04, 05 and 06) have been completed for a total of 800 metres of drilling. Check assays for some earlier holes and assays for the final hole (DDH04-06) were received during October. Altogether some 340 core samples have been assayed, all for gold and silver plus 33 other elements. A total of 18 rock samples collected from the drill core have been investigated by petrological thin section examination.

The following table reports intercepts to a cut-off of 0.2 grams per tonne (g/t) gold or 10 g/t silver.

<u>Hole</u>	From	<u>To</u>	Length (m)	Au g/t	Ag g/t	As ppm
DDH04-01	123.00	125.88	2.88	0.018	1,070	35
	128.80	130.45	1.65	0.006	10.9	3
DDH04-05	235.76	235.91	0.15	0.259	< 0.2	5,900
	289.88	290.30	0.42	0.332	0.5	589
DDH04-06	19.40	20.60	1.20	0.951	<0.2	9,930

### Klondike Source Limited

Spotty (nuggetty) gold distribution was indicated by initial check assays for the interval 290.02-290.30 in hole DDH04-05. Subsequently, the entire sample sent to the laboratory was used in making repeat assays which resulted in a total of 12 assays reporting values ranging from 0.07 up to 2.40 g/t gold. Check assaying of select samples from other holes is now under consideration.

#### **Preliminary Interpretations**

Provisional conclusions are that precious metal mineralisation may be zoned from east to west within the area drilled.

- 1. Holes DDH04-05 and 06, at the western end of the drill grid have clearly encountered gold + arsenic mineralization, while approximately 2.5km to the east, mineralisation in hole DDH04-01 consists of silver + trace gold (nil arsenic).
- 2. It appears that the intensity of gold mineralization increases westward. This trend suggests that the anomalous aeromagnetic 'low' (dimensions of approximately 3km x 1.5km) that is located immediately northwest of holes DDH04-05 and 06 (see attached figure) could be associated with a significant locus of gold mineralization.
- 3. Preliminary petrological observations indicate that at least two stages of hydrothermal alteration are present in the area of holes DDH04-05 and 06; an early low temperature stage of near-neutral fluids, followed by moderately acidic fluids depositing veinlets of carbonate, clay and some chlorite and sulphides. At this time, it is not clear which of these hydrothermal alteration events was accompanied by gold mineralization.

The multi-element core analyses provide an extensive geochemical data resource which also is being examined for geochemical signatures that could corroborate the observed precious metal trends and alteration episodes.

The Company is encouraged by these results. They add further weight to the opinion stated in the Company's release to the Newcastle Stock Exchange dated 15 September 2004, that the 2004 drill program is considered to have encountered a weakly gold mineralized "halo" that could be peripheral to a substantial gold mineralized system.

It is expected that the data collation and interpretations now underway will provide the technical basis for a target-oriented drill program for 2005.

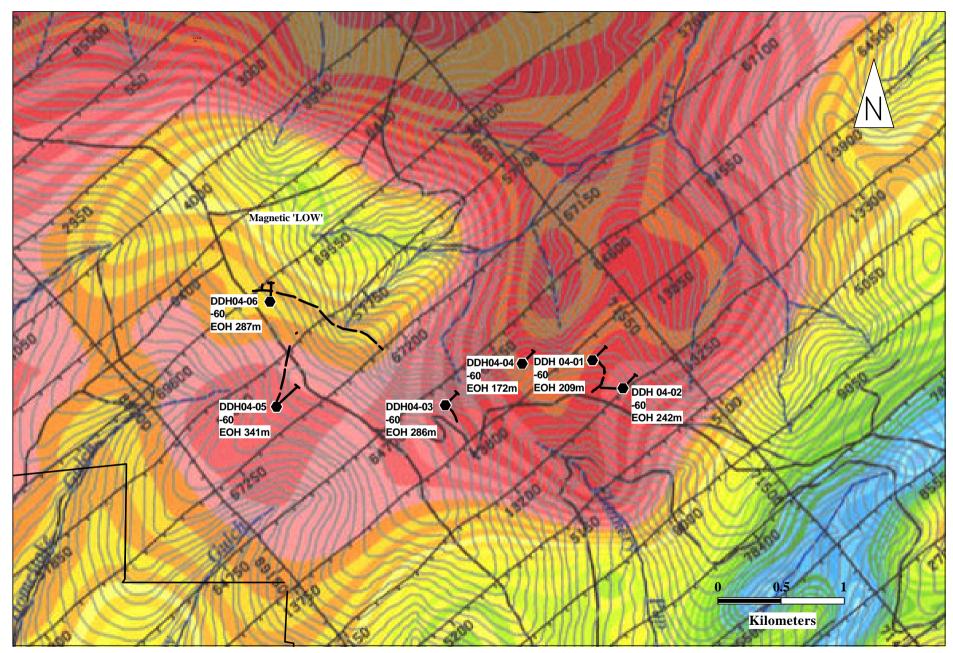

#### **GENERAL**

The Company is considering several proposals that may have the potential to significantly expand its portfolio of gold exploration properties.

#### **DISCLOSURE**

Relevant sections in the above statement are based on information compiled by Robert Gerard Adamson, a corporate member of the Australasian Institute of Mining and Metallurgy having over five years relevant experience.

#### Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 Issued and quoted securities The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, AASB 1022: Accounting for Extractive Industries and AASB 1026: Statement of Cash Flows apply to this report.
- 5 **Accounting Standards** NSX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
